

Day 17

Objective: To understand phishing attacks targeting mobile users and smartphone platforms.

Work Description: This day focused on mobile-based phishing attacks such as SMS phishing (smishing) and malicious application permissions. The trainer explained how attackers exploit smaller screens, quick user interactions, and permission fatigue. Real examples of fake OTP messages and delivery updates were analyzed. Defensive measures such as avoiding unknown links and verifying application permissions were discussed in detail.

Outcome: Gained awareness of mobile phishing threats.
