Day 4
Objective: To understand different types of social engineering attacks.

Work Description: Various forms of social engineering attacks were discussed, including phishing, spear phishing, whaling, vishing, smishing, impersonation, and baiting. The trainer explained how attackers customize attacks based on the target. Differences between mass phishing and targeted phishing were explained with examples. The session also highlighted how social media information is used to craft convincing phishing messages.

Outcome: Learned classification and characteristics of social engineering attacks.
