Day 2
Objective: To understand basic networking concepts related to phishing attacks.

Work Description: The second day focused on basic networking fundamentals required to understand how phishing attacks are delivered. Topics such as IP addresses, DNS, HTTP/HTTPS communication, and client-server architecture were explained. The trainer described how phishing links travel across networks and redirect users to fake websites. Understanding domain names and URL structures helped in identifying suspicious links. This session built the foundation for analyzing phishing URLs and network behavior during attacks.

Outcome: Learned how networking plays a critical role in phishing attack execution.
